

Moose

Across

1. An individual male animal that mates with more than one female animal during a breeding season.
4. Moose don't graze on grasses, but snip twigs and other vegetation.
6. Northern forest typical in Canada - dominated by pine, spruce, poplar and birch trees. (2 words)
9. The Latin name for Moose. (2 words)
11. Courtship behaviour in ungulates where males act aggressively against one another.
12. Female ungulates.
13. Animals with hooves.
14. A reproductive hormone spread through the air, attracting mates through smell or taste.
15. A group of females mating with one male.
16. The Family of hoofed animals that includes deer.
17. The period of an offspring's development during pregnancy.

Down

1. A breeding group of a species.
2. Animals that eat mostly plants.
3. An organism living on or inside a host organism (usually much larger) in a way that is often harmful.
4. Animals that live in northern areas tend to be larger than individuals of the same species living further south. Their bigger size keeps them warmer in the colder winters. (2 words)
5. Young ungulates.
7. Male ungulates.
8. A fold of skin that hangs from a Moose's throat.
10. Adult male Moose grow these every spring - then they fall off again by January.
14. A flat, wide shape like the palm of your hand.
